

CONTROL YOUR CEILING FAN WITH YOUR SMART DEVICE!

WARNING: What you are about to read may cause a sharp spike in your ceiling fan’s IQ. For years we’ve witnessed ordinary devices with average intelligence evolve into technologically advanced systems deserving of the title “Smart.” From our smart phones to our smart homes, we now have the power to control our lives with the swipe of a finger. But it was not until Fanimation unveiled fanSync that our ceiling fans joined the ranks of the electronically elite. fanSync deftly integrates Bluetooth technology into a ceiling fan receiver compatible with most AC motor, three-speed fans. The fanSync application can be downloaded on IOS and Android devices and allows users to control their fans with the slide of a finger. Use multiple devices to control one fan or one device to control multiple fans — the power is in your hands. fanSync is not brand specific and will work with many makes and models of ceiling fans. Do you want the smartest ceiling fan in your neighborhood? If the answer is “yes,” just answer these quick questions to see if fanSync is right for you.

PHONE COMPATIBILITY

What type of mobile device do you have?

FAN COMPATIBILITY

What type of fan do you have?

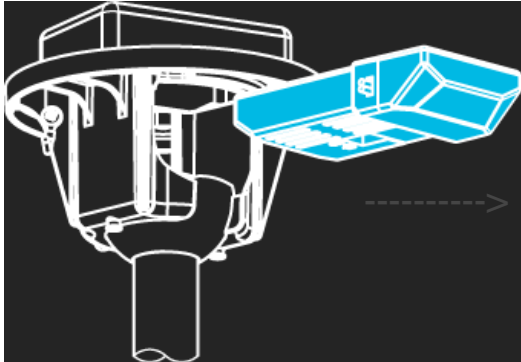

I'm not sure
